

– New SOLVCARD –

Paris, France — VFP Ink Technologies introduced a new generation of solvent based inks for Laminated Plastic cards, **CMR free and non toxic**:

New SOLVCARD, a completely redesigned, breakthrough solution for card manufacturers (bank card, gift card, loyalty card) which meets ISO/IEC 1037. A product **which takes much better care of the plant employees and the environment**.

20 metallic colors (Silver, Gold and Pearlescent shades) and deep Opaque White are available.

Major advantages of New SOLVCARD are:

- Non registered ADR, IMDG, IATA: meets the Safety global standards

Not dangerous to ship

- Cost efficiency
- High resistance to peeling test (8 to 10 N/cm²)
- Easy to use (reduce chemical product inconvenience)
- High opacity white
- Carcinogenic, mutagenic, reprotoxic (CMR) substances Free

Arnaud Maquinghen, General Manager of VFP Ink Technologies explains: *“Today, there is no solution which gathers pros without cons in Solvent ink. New Solvcard changes the game and I am pleased to offer another way to print cards more environmentally friendly and better for humans in the printing industry”*.

About VFP Ink Technologies

VFP Ink Technologies devises high-tech inks and varnishes for today's and tomorrow's industries.

It perpetually challenges itself and offers new prospects for the future of printing thanks to functional inks, innovative products and process.

French SME, expert in screen printing consumables, solutions and high-tech printing technologies, the company is involved in many research and collaborative industrial projects. It brings new durable solutions such as the latest developments in plastronics with conductive inks.

A major European player, VFP Ink Technologies distributes its full range of products and expertise in 5 continents.
